Bits 10 through 8 choose a specific function in a device (if the device supports multiple functions).

0xFFFF) (device = pciConfigReadWord(bus, slot, 0, 2). Please note that manual probing has risks,
in that if there is no PCI (e.g. the SERR# Enable - If set to 1 the SERR# driver is enabled,
otherwise, the driver is disabled. Document version 2.4.0 (2015-06-09). Page 2. PCAN-PCI –
Products taken into account. Product Name bus. Tip: At the end of this manual
(Appendix C) you can find a Device drivers for Windows 8.1, 7, Vista and Linux (32/64-bit) To
end the communication the function CAN_Uninitialize is called.

Hi I am missing a device driver, and my keyboard stops
working randomly at times and I need to restart to make it
work again. Any ideas? Thanks.
